

Digital-ABB Sample InfraSummary

Executive Infrastructure Visibility Report

Sample executive report demonstrating the outcome of a Digital-ABB Infrastructure Alignment Assessment.

Executive Summary

Digital-ABB provides documented visibility into infrastructure assets, operating conditions, environmental observations, and infrastructure documentation to support informed operational decisions.

Assessment Snapshot

- Infrastructure Assets Reviewed: 38
- Racks Reviewed: 6
- Documentation Gaps Identified: 4
- Airflow Restrictions Observed: 2
- Asset Condition Concerns: 3
- Environmental Conditions: Acceptable with Recommendations

Sample Findings

Asset Visibility: Several infrastructure assets were present without documented inventory records.

Infrastructure Documentation: Discrepancies observed between physical assets and available documentation.

Airflow Pathways: Intake airflow partially restricted by cable congestion.

Thermal Conditions: Localized temperature variation observed.

Historical Tracking: No documented condition history available for comparison.

Recommendations

- Establish Infrastructure Condition Records
- Create verified asset inventory
- Improve documentation visibility and change tracking
- Review airflow pathways and rack organization
- Perform periodic Infrastructure Alignment Assessments

Digital-ABB Observation

Visibility is the foundation of informed infrastructure decisions. Organizations cannot effectively manage assets, environments, and operational risks that are not documented, reviewed, or

understood.
