

Request Infrastructure Assessment

Most organizations maintain visibility into their networks, applications, and cybersecurity systems.

Far fewer maintain visibility into the physical infrastructure assets and operating environments those systems depend on.

Digital-ABB's Infrastructure Alignment Assessment provides documented visibility into:

- Infrastructure assets and their observed condition
- Airflow, thermal, and environmental observations
- Cabling and documentation visibility
- Historical condition tracking
- Infrastructure Condition Records
- Executive InfraSummary Reports

The assessment helps organizations identify infrastructure misalignment, undocumented assets, environmental concerns, and operational blind spots before they become larger operational challenges.

Request your Infrastructure Alignment Assessment today.
